Sequence 7, Application US/09808037

Patent No. US20020052311A1

GENERAL INFORMATION:

APPLICANT: HANNA, Eilat

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE TREATMENT AND/OR DIAGNOSIS OF

TITLE OF INVENTION: NEUROLOGICAL DISEASES AND DISORDERS

TITLE OF INVENTION: NEUROLOGICAL DISEASES AND DISORDERS

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE TREATMENT AND/OR DIAGNOSIS OF

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR THE TREATMENT AND/OR DIAGNOSIS OF

FILE REFERENCE: SOLOMON-2D

CURRENT APPLICATION NUMBER: US/09/629,971

PRIOR PILING DATE: 1999-10-29

APPLICANT: Van Broeckhoven, Christine Kumar
TITLE OF INVENTION: A NOVEL APP MUTATION ASSOCIATED WITH AN UNUSUAL ALZHEIMER'S DISEA
TITLE OF INVENTION: PATHOLOGY
FILE REFERENCE: 2183-5642US
CURRENT APPLICATION NUMBER: US/10/337,970
CURRENT FILING DATE: 2003-01-06
NUMBER OF SEQ ID NOS: 8
SOFTWARE: Patentin version 3.1
SEQ ID NO 8
LENGTH: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     OTHER INFORMATION: synthetic peptide corresponding to amyloid beta peptide residues OTHER INFORMATION: 1-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ; OTHER INFORMATION: Synthetic peptide containing epitope for JRF/ABN/25 antibody.

FURBERAL INFORMATION:

TITLE OF INVENTION: ANTI-AMYLOID ANTIBODIES, COMPOSITIONS, METHODS AND USES

FILE REFERENCE: CENSO21 NP

CURRENT FILING DATE: 2004-03-26

PRIOR PILING DATE: 2003-03-28

PRIOR PLICATION NUMBER: US 60/458,469

PRIOR PLICATION NUMBER: US 60/458,509

PRIOR PLILING DATE: 2003-03-28

PRIOR FILING DATE: 2003-03-28

PRIOR FILING DATE: 2003-03-28

Sequence 44, Application US/10625854

Publication No. US20050175626A1

GENERAL INFORMATION:
APPLICANT: Delacourte, Andr

APPLICANT: Sergeant, Nicolas

TITLE OF INVENTION: Pervention, treatment and diagnosis of diseases associated with
TITLE OF INVENTION: Deca-amyloid formation and/or aggregation

TITLE OF INVENTION: Deca-amyloid formation and/or aggregation

FILE REFERENCE: 11362.0039.NPUS01 (INNS019--)

CURRENT APPLICATION NUMBER: US/10/625,854

CURRENT FILING DATE: 2003-07-23

FRIOR APPLICATION NUMBER: 60/401,497

PRIOR APPLICATION NUMBER: 60/401,497
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       APPLICANT: Sergeant, Nicolas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a peptide epitope derived from beta-amyloid precursor protein peptide. The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprising a recombinant molecule containing a gene encoding a recombinant antibody end-specific for the N-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumilation of beta-amyloid peptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease by inhibiting the interaction of beta-amyloid peptides induced neurotoxicity and inhibiting the Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                      Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.

                                                                                                                                                                                          The invention comprises a method for treating a neurological disease or a central nervous system (CNS) disorder. The method involves displaying a therapoutic molecule capable of treating the neurological disease or CNS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or disorder. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CNS disorders, such as:
Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain; brain tumours; lysosomal storage diseases; Parkinson's disease; and multiple sclerosis. The present amino acid sequence represents a peptide which was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Noctropic, neuroprotective, antiinflammatory, vaccine, antigenic product; plaque-forming disease; Alzheimer's disease; SAA amyloidosis;
Treating or diagnosing neurological diseases of the central nervous system, e.g. Alzheimer's disease, comprises displaying a polypeptide or diagnostic agent on viral display vehicle and introducing or detecting the display vehicle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

```
The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is free-end specific and is targeted to: (a) the free N-terminus of amyloid beta-eptide, where the first amino acid of amyloid beta-apptide beta-peptide, where the first amino acid of amyloid beta-apptide beta-peptide fragment; (c) the free C-terminus of the amyloid beta-peptide beta-peptide fragment; (c) the free C-terminus of the amyloid beta-peptide beta-peptide fragment; (c) Abetal-41 or Abetal-43; or (e) to the free C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide Abetal-42; and (3) a cartificial antibody targeted to amyloid beta-peptide has nootropic and carrier. The antibody targeted to amyloid beta peptide has nootropic and carrier. The antibody targeted to amyloid beta peptide has nootropic and carrier. The cantibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease, or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy of amyloid beta peptide or its fragment.

Co for delaying, inhibiting or suppressing accumulation of amyloid beta peptide are derived from beta apptide or its fragment.

Co peptide, or the neurotoxicity of amyloid beta peptide or its fragment.

Co peptide, or the neurotoxicity of amyloid beta amyloid beta peptide are derived from beta amyloid beta peptide which is used in the exemplification of the present anyloid beta peptide are derived from beta amyloid beta peptide which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immune response; beta-secretase cleavage site; amyloid precursor protein; APP; nootropic; neuroprotective; vaccine; passive immunisation; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                    New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 24; DB 7; Length 4; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to antigenic products (A), comprising a dendritic polymer built on a core molecule which is at least difunctional to provide branching and containing up to 16 terminal functional groups to which an antigenic peptide, that comprises an epitope of a depositional golypeptide involved in plaque-forming disease, is joined by covalent bonds. The antigenic products are useful for eliciting an immune response against a deposit-forming polypeptide involved in a plaqueforming disease or disorder, e.g. Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldtjakob disease, Kuru, Gerstmann-Straussler-Scheinker disease, fatal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody; amyloid beta peptide; amyloid beta; nootropic; neuroprotective; antibody therapy; Alzheimer's disease; mild cognitive impairment; cerebral amyloid angiopathy; congiophylic angiopathy; Down's syndrome; inclusion body myositis; neurotoxicity; beta amyloid precursor protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antigenic product has dendritic polymer built on core molecule having terminal functional groups to which antigenic peptide that has epitope of deposit-forming polypeptide involved in plaque-forming disease is joined.
hereditary Icelandic syndrome; senility; multiple myeloma; Creutzfeldt-Jakob disease; Kuru; Gerstmann-Straussler-Scheinker disease; fatal familial insomnia; scrapie; bovine spongiform encephalitis; antigenic; multiantigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     administering the antigenic product to a subject in need of it. The present sequence is one such antigenic peptide, which was used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a
                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an immunising composition (A) comprising:

(a) an antigenic product (I) which induces an immune response against the beta-secretase cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (1) a molecule (II) comprising the antigen-binding part of an antibody (AD) directed against the beta-secretase cleavage site of APP; (2) a filamentous bacteriophage (FB) that displays (II), where this is a single chain Ab, on its surface; and (3) a composition containing FB. (A) has nootropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage of APP and so prevents the formation of beta-amyloid. (A) can be used to induce an immune response against the beta-secretase cleavage site of APP, specifically that contains the antigen-binding part of an Ab directed against the cleavage site, or a filamentous phage that displays such an Ab (as a single-chain molecule) can be used similarly, for passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Neurological disease; central nervous system; CNS disorder; plaque-forming disease; Alzheimer's disease; SAA amyloidosis; hereditary Icelandic syndrome; senility; multiple myeloma; scrapie; hovine spongiform encephalopathy; BSE; kuru; Greutzfeldt-Jakob disease; CUD; Gerstmann-Streussler-Sheinker disease; GSS; fatal familial insomnia; FFI; non-plaque-forming disease; Huntington's chorea; viral infection; brain tumour; lysosomal storage disease; neurodegeneration; huntiliple sclerosis; vaccine; beta amyloid peptide; epitope; beta AP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a beta-amyloid (Abeta) peptide which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                 composition, useful for treating Alzheimer's disease by processing of amyloid precursor protein, also antibodies for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

displaying a therapeutic molecule capable of treating the method involves displaying a therapeutic molecule capable of treating the neurological displaying a therapeutic molecule capable of treating the neurological displaying a therapeutic molecule of viral display vehicle into a subject by applying an effective amount of the viral display vehicle into a subject by applying an effective amount of the viral display vehicle into a subject by applying an effective amount of the viral display vehicle into a subject. The method is useful for treating a neurological disease of disorder. The method is useful for treating a neurological disease, late onset Alzheimer's disease, so nest Alzheimer's disease, screen, bovine spongiform.

Cresymptomatic Alzheimer's disease, SAA amyloidosis, hereditary Icelandic Syndrome, senility, multiple myelome, scrapic, bovine spongiform.

Crecophalopathy (BSD), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmanner, Streussler-Sheinker disease (GSS) or fatal familial insomnia (FFI). The cancephalopathy (BSD), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmanner, Streussler-Sheinker disease (GSS) or fatal familial insomnia (FFI). The disorder e.g. Huntington's chorea, viral infections of the brain, brain theorem storage diseases which cause neurodegeneration and are manifested by enzyme deficiencies and multiple sclerosis. The invention is sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating neurological disease CNS e.g., Alzheimer's disease, by displaying therapeutic molecule capable of treating the disease on viral display vehicle which is then administered to subject through olfactory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention relates to a method of treating a neurological disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

Providing labeled target protein or target peptide by contacting chemical compound with affinity support, removing impurities in reaction mixture surrounding affinity support, cleaving or eluting chemical molecule from affinity support.
                                                                                                                                                                                                                       The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                     New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein labelling; peptide labelling; irreversible affinity tagging residue; reversible affinity tagging residue; high throughput screening assay; pharmaceutical agent; affinity tag.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Protein/peptide labelling method-related affinity tag peptide #3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                       New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-Gln-Lys-Leu-Val-Phe-Aha-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a mucleic acid molecule Gly ADA89887 or its fragment. Also described: (1) a mucleic acid molecule encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (2) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) of a kit comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1) or conditions and or recovering (1) from the culture; (5) a composition the resulting Fab optimisation of (3); (7) optimising (1); (1); (1) a kit comprising optimisation of (1); and formulating the composition comprising optimisation of (1); and formulating the composition prepared by method (8). (1) has pharmaceutical composition prepared by method (8). (1) has pharmaceutical composition prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be neuroprotective, nootropic and antiparkinsonian activities, and can be neuroprotective, nootropic and antiparkinsonian activities, and can be neuroprotective, nootropic and antiparkinsonian activities, and can may also be used in preparing a pharmaceutical composition for myloid-plaque formation. The antibody molecule may also be used in preparing a disease associated with may also be used in preparing of disease associated with a cartical disease mentioned above. The antibody is used for the disease contract or of the accompleted formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, nown's syndrome, contained type, Parkinson's disease, HIV-Tellated dementia, any place place any place place any place and place any place and place and any place a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                The invention comprises a method for providing a labelled target protein/peptide. The method involves contacting a chemical compound with affinity support, removing impurities in the reaction mixture surrounding the affinity support to which the chemical molecule is bound, and cleaving or eluting the molecule from the affinity support to obtain irreversible or reversible affinity tagging residue, labelled target protein or labelled affinity is the method of the invention is useful for labelling a target protein/peptide or high throughput screening assay. The method of the invention is useful for indentifying agents that modulate the activity or characteristics of a target protein/peptide such agents that such agents are useful as pharmaceuticals. The present amino acid sequence represents an affinity tag peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Albeimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Huber W, Kretzschmar T;
Rothe C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           h Similarity 100.0%; Score 24; DB 8; Length 5; Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                         The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (App) soluble fragment or C-terminal fragment. The beta-amyloid or App preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                                       New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAA70863). The peptide is a beta-amyloid precursor protein (beta-APP, see AAA70863). The peptide is a beta-amyloid peptide and is used to produce a monoclonal antibody. The specification celescribes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition Alzheimer's disease. The method comprises administering a composition comprising a recombinant bNA molecule containing a gene encoding a comprising a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promocer which is expressed in the central nervous system. The recombinant antibody molecules prevent in the acritical fluid and cerebrospinal fluid and the aggregation of such interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease by inhibiting the intersaction of beta-amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and inhibiting the alzheimer's disease induced complement activation and cytokine release involved in the inflammatory process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                     Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                               Preventing or inhibiting progression of Alzheimer's Disease - comprises use of recombinant DNA encoding an antibody specific for the N- or C-terminus of an amyloid-beta peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

This peptide is based on the N-terminal fragment of beta-amyloid peptide (beta-AP) and was fused to the minor coat protein of fd phage. This peptide may be used in the method of the invention. The invention provides an agent for treating a plaque forming disease. The polypeptide pis displayed on a display vehicle and is capable of eliciting antibodies capable of disaggregating the aggregating protein and/or of preventing aggregating to the aggregating protein. This reduces formation of plaques in the brain of victims of plaque forming disease, presence Alzheimer's disease, late onset Alzheimer's disease, say amyloidosis, hereditary Icelandic symptomatic Alzheimer's disease, and acrapie, bovine spongiform encephalopathy (BSE), kuru, Creutzfeldt-Jakob Disease (CUD), Gerstmann-Streussler-Sheinker Disease (GSS) and fatal familial insomnia (FFI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vaccine; gene therapy; neurological disease; CNS disorder; central nervous system disorder; olfactory system; Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; Parkinson's disease; viral infection of the brain; brain tumour; lysosomal storage disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                          The invention comprises a method for treating a neurological disease or a central nervous system (CNS) disorder. The method involves displaying a therapeutic molecule capable of treating the neurological disease or CNS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or disorder. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CNS disorders, such as:
Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain; brain tummours; lyesomal storage diseases; Parkinson's disease; and multiple solerosis. The present amino acid sequence represents a peptide which was used in the invention

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Argy-His-App. Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Glu-Val-Phe-Phe-Abp-Phe-App-Val-Cally ADA89887 or its fragment. Also described: (I) a mucleic acid molecule call comprising (I); (2) a vector comprising the nucleic acid of (1); (3) a host call comprising the vector of (2); (4) preparing (I), comprising (I) call recovering (I) from the culture; (5) a composition comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) cor an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) cor an antibody molecule produced by method (4); (6) a kit comprising (I) cor an antibody molecule produced by method (4); (6) a kit comprising (I) cor an antibody molecule with a carrier; and (12) a paramaceutical composition, comprising optimisation of (I), and formulating the composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a pharmaceutical composition prepared by method (8). (I) has cued in gene therapy. The antibody molecule with a carrier; and call molecule composition and/or treatment of a disease associated with a disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is and/or amyloid plaque formation. The antibody molecule composition of beta-amyloid plaque formation. In particular, the disease is centured by a sord or method above and or for passive dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, content or parkined a disease, Hordor and disease, Hordor and disease, Hordor and disease and the disease and dementia. Alzheimer's disease, motor neuropathy planed for the demential particular and park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

beta peptide, or its fragment. And distributed that is free net appecific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, where the free N-terminus of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide is apparate; (c) the free N-terminus of N- and/or C-terminus-truncated amyloid beta-peptide freagment; (d) the free C-terminus of N- and/or C-terminus of D-terminus of N- and/or C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial amyloid beta-peptide Abbetal-42; and (3) a pharmaceutical composition comprising the antibody, and a carrier. The neuroprotective activities, and can be used in antibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease, or a disease or discorder characterised by amyloid beta deposition (eg. mild cognitive impairment, cerebral amyloid angiopathy or congiophylic anglopathy, Alzheimer's characterised by anyloid beta deposition (eg. mild cognitive impairment, cerebral amyloid angiopathy or congiophylic anglopathy, Alzheimer's characterised by anyloid beta deposition (eg. mild cognitive impairment's chasses asseciated with Down's syndicme, or inclusion body myositis), or characterised by anyloid beta deposition (eg. mild cognitive impairment's chasses asseciated with Down's syndicme, or inclusion body myositis), or common c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive
                       antibody, amyloid beta peptide; amyloid beta; nootropic; neuroprotective; antibody therapy, Alzheimer's disease; mild cognitive impairment; cerebral amyloid angiopathy; congiopathy; bown's syndrome; inclusion body myositis; neurotoxicity; beta amyloid precursor protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (APP). The present sequence represents an amyloid beta peptide which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present invention describes an antibody that is targeted to amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for delaying, inhibiting or suppressing accumulation of amyloid beta peptide, or the neurotoxicity of amyloid beta peptide or its fragment. Amyloid beta peptide are derived from beta amyloid precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (MIND-) MINDSET BIOPHARMACEUTICALS USA INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 2; Page 29; 63pp; English.

Treating neurological disease CNS e.g., Alzheimer's disease, by displaying therapeutic molecule capable of treating the disease on viral display vehicle which is then administered to subject through olfactory system.

Example 9; SEQ ID NO 7; 68pp; English.

The invention relates to a method of treating a neurological disease or disorder of the central nervous system (CNS). The method involves displaying a therapeutic molecule capable of treating the neurological disease or disorder of the CNS on a viral display vehicle and introducing viral display vehicle into a subject by applying an effective amount of the viral display vehicle displaying the therapeutic molecule to an of factory system of the subject. The method is useful for treating a conflactory system of the subject. The method is useful for treating a context as a plaque-forming disease such as Alzheimer's disease, late onset Alzheimer's disease, syndrome, senility, multiple myeloma, scrapic, bovine spongiform concephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CJD), Gerstmann-Strinker disease (GSS) or fatal familial insomnia (FFI). The method is also useful for treating a non plaque forming disease or tumours, lysosomal storage diseases which cause neurodegeneration and are tumours, lysosomal storage diseases which cause neurodegeneration and are manifested by enzyme deficiencies and multiple sclerosis. The invention is also used in the preparation of vaccines. The present sequence is fd page peptide used to raise non-aggregating beta APP (beta amyloid of the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a treatment of a disease associated with beta-amyloid formation and or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

The invention describes a novel composition comprising a core particle with at least one attachment site, and an antigenic amyloid beta 1-6 peptide. The new composition comprises: a core particle with at least one first attachment site; and at least one antigen or antigenic determinant with at least one second attachment site, where the antigen or antigenic determinant is a Amyloid beta 1-6 peptide, and where the second attachment site comprises: an attachment site not naturally occurring with the antigen or antigenic determinant; or an attachment site naturally occurring with the antigen or antigenic determinant; The second attachment site is capable of association to the first attachment site and the beta 1-6 peptide and the core particle interact through the association to form an ordered and repetitive antigen array. The
